

First Co-Innovation partnership and certification with SAP Korasoft releases BIM4RE – Space, Lease, and Real Estate

During SAPHIRE in March 2023, SAP announced relying on external partners for future facility management solutions. With BIM4RE - Space, Lease, and Real Estate Korasoft releases the first result of a co-innovation partnership with SAP. This co-innovation partnership combines the strengths of Korasoft and SAP, focused on finding the right products to build upon and enhance the SAP portfolio with the external knowledge of a trusted partner. BIM4RE is a cloud-based software for master data and process management, built with SAP Real Estate and Enterprise Asset Management. It serves as an all-encompassing solution for the basics of everything from graphic integration to leasing. Working with the SAP Business Technology Platform (BTP) BIM4RE shows, for the first time, what the future of cloud-based facility management can look like.

Korasoft has been developing cloud-based solutions for facility management for over 20 years. After the SAP announcement, the new co-innovation partnership with SAP and, resulting from it, the certified new software BIM4RE are the first steps to future-proof the integration of Korasoft systems into the SAP structures.

SAP® Certified
Built on SAP Business Technology Platform
Co-Innovated with SAP®

"The co-innovation partnership is an important step to further development of the future of digital facility management in SAP. This partnership combines the SAP knowledge of modern technologies and our understanding of processes that we could accumulate since the founding of Korasoft in 1999."

Claus Ludewig, CEO Korasoft GmbH

BIM4RE combines the essential functions of many proven Korasoft solutions with the reliable SAP server structure and presents them on an intuitive, graphic-based user interface. Thus, BIM4RE simplifies the data migration and -processing processes within the secure SAP environment. The all-round solution presents an easy-to-understand structure while guaranteeing consistently high data quality. BIM4RE is Korasoft's first SAP-co-innovated and SAP-certified software within the SAP store; further certified solutions are already in process. Besides closely working with SAP, Korasoft also continues and expands its cooperation with leading CAFM and IWMS experts like Autodesk to guarantee comprehensive solutions from the first data integration to a finished leasing contract and bookings in ERP - regardless of whether it's On-Premise or in a cloud environment.

About Korasoft

Korasoft develops visual facility management solutions in SAP. Korasoft's software uses proven graphic tools by Autodesk and is fully integrated with SAP. The solutions combine CAD blueprints with SAP systems to provide versatile solutions for any CAFM or CREM task with a clear focus on usability and efficiency. Founded in 2002 in Aichtal (Germany), Korasoft maintains a presence in Chicago, IL.
